

Policy for the future:

The Fuyo Lease Group constantly adopts environmentally-friendly business practices in order to realize a sustainable society and promotes activities to address environmental issues in line with our Environmental Policy. Our “Environmental Policy” mainly states “Providing products and services that contribute to environmental conservation” “Promoting resource and energy efficiency” “Contributing to the development of a circular society”. Under this policy, we will promote efforts to conserve biodiversity.

Providing products and services that contribute to environmental conservation

Initiatives related to Biodiversity

The Fuyo Lease Group's Aqua Art Co., Ltd. offers aquarium layouts with tropical fish and aquatic plants for rent.

A Natural Ecosystem in an Aquarium Tank

Within the aquarium tank, microorganisms decompose leftover fish food and waste, which are used as fertilizer to produce oxygen through photosynthesis by the growing aquatic plants, purifying the water and keeping the fish healthy. In this manner, a natural ecosystem cycle is reproduced in the tank.

Promote In-house Breeding for Fish and Aquatic Plants

Aqua Art launched the SDGs-Related Project and established a system to provide a certain quantity of fish and aquatic plants through the in-house breeding of tropical fish such as platies, guppies, corydoras, and African butterfly cichlids, as well as reusing and cultivating aquatic plants brought back from maintenance work.

Succeeded at Breeding an Endangered Species

In the fall of 2020, we succeeded at breeding the Japanese rosy bitterling, a freshwater fish unique to Japan.

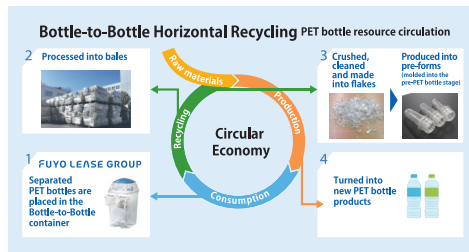

Promoting resource and energy efficiency

Promotion of Zero Waste Activities

Zero Waste Activities aim to minimize the amount ultimately generated as waste by reducing the amount of trash generated from offices and recycling it as a resource.

Horizontal Recycling of PET bottles

We are taking part in a bottle-to-bottle initiative taking used PET bottles and recycling them into new PET bottles. At the Group's head office, individual employees place separated PET bottles in a transparent container for collection and these are then recycled to be used as new PET bottles.

Contributing to the development of a circular society

Fuyo Circular Economy Lease (CE Lease)

The Fuyo Lease Group launched Circular Economy (CE) Lease as a new service. With CE Lease, we seek to achieve extended product life and better resource recycling by steadily reusing and recycling lease assets. Customers can contribute to the circular economy through this product. In addition, we are donating a certain percentage of the proceeds from our lease transactions to organizations that promote the circular economy in order to support their activities.
