

Policy for the future:

The DAIDO METAL GROUP's basic environmental philosophy is to do its best to preserve the environment. We are aware that preserving the global environment, which is the common property of all humankind, is one of the most important tasks imposed on humanity. We will focus all efforts and technology on preserving the environment. In order to realise a sustainable society and society coexisting with nature we strive to protect and revitalise natural resources including biodiversity and ecosystems through cooperation and collaboration with stakeholders.

Connecting with the Environment

Planting trees at the head of Nagara River

Every May employees and their families participate in tree planting for the 'Forest Cultivation Project at the head of Nagara River' sponsored by Gujo Fishery Cooperative.

A total of 380 trees were planted in 2023, and 400 in 2024.

Mangrove Planting (Thailand)

We participate in mangrove planting activities to bring back the former mangrove forests as a way to reduce greenhouse gases while preventing flood damage.

In 2022 we planted a total of 300 mangrove saplings.

Connecting with the Local Area

Supplying Wooden Pallets to the Japan Monkey Center

We supplied wooden pallets from the factory to help support the operation of the Public Interest Incorporated 'Japan Monkey Center' in Inuyama and enrich the lives of the monkeys. The zookeepers have transformed the wooden pallets into places the monkeys can shelter away from the rain or cold.

Coastal and Waste Water Purification (Philippines)

In cooperation with local government we take part in activities to clean up drainage and coastal waters, and carry out environmental management and community initiatives.

To protect our rich environment we are working on removing waste and debris from coastal areas and drainage systems.
